

La 2^e vie des équipements électriques

This price list of eco-contributions is intended for producers of Electrical and Electronic Equipment (EEE) **professional** members of Ecologic.

In red, the changes in the price list are specified on January 1, 2023.

Since July 1, 2020, the eco-contribution of professional EEE must be adjusted according to eco-design criteria.

The detail of these criteria is specified for each equipment in the summary attached to the price list of eco-contributions.

The technical note on how to apply the criteria for modulating the environmental contribution of professional EEE is also available.

If it is not possible to justify the eco-modulation criteria or in case of doubt, the least favorable price should be applied.

Example of equipment is a non-exhaustive list of products subjected to regulation.

The accessories (i.e. remote control ...) sold with the equipment are an integral part of the equipment.

Electrical spare parts sold separately must be declared separately using the dedicated pricing codes.

Equipment > 50 cm : equipment with any external dimension more than 50 cm

Equipment < 50 cm : equipment with no external dimension more than 50 cm

The minimum annual charge is 75€, excl. taxes
